SUMMARY

Third-year Software Engineering student focused on backend development with Java and Spring Boot. Hands-on experience with RESTful API development, Spring Security, JWT-based authentication, payment integration, and multi-step business workflows. Seeking a Backend Developer Intern position to contribute to production-oriented projects and further develop backend engineering skills.

EDUCATION

FPT University

Bachelor of Software Engineering
GPA: 7.72/10

Ho Chi Minh City, Vietnam
2023 – Present

TECHNICAL SKILLS

Languages	: Java, SQL
Backend & APIs	: Spring Boot, Spring Security, JPA/Hibernate, REST APIs
Databases	: MySQL, Microsoft SQL Server
Tools	: Git, GitHub, Postman, OpenAPI

PROJECTS

HRTMS – *Horse Racing Tournament Management System*

June 2026 – August 2026

Backend Developer · 2-member team · [GitHub](#)

Tech Stack: *Java 21, Spring Boot, Spring Security, Spring Data JPA, MySQL, Flyway, JWT, VNPay, WebSocket*

- Implemented **50+ RESTful endpoints** and designed and extended **16 JPA entities** across authentication, wallet and payment, Owner–Jockey contracts, notifications, pre-race inspections, and horse-rating modules.
- Owned authentication and authorization for **seven user roles** using Spring Security, JWT, and RBAC; implemented registration, login, profile retrieval, and email OTP verification.
- Integrated **VNPay** for wallet deposits and prize-pool funding, including checksum verification, Return/IPN handling, and transaction lifecycle management from **CREATED** and **PENDING** to **SUCCESS** or **FAILED**.
- Ensured financial consistency using **@Transactional**, pessimistic locking, and idempotent callback processing; developed wallets, invoices, transaction history, contract settlements, and full or partial refunds.
- Built the Owner–Jockey contract workflow, including invitations, responses, rental payments, administrator approval, cancellation, refunds, and validation against overlapping contracts within the same tournament.
- Developed real-time WebSocket and email notifications with JWT-authenticated channels, recipient selection, user preferences, scheduled delivery, and retry handling; managed schema migrations with Flyway and documented APIs using Swagger/OpenAPI.
