SUMMARY

DevSecOps Engineer specializing in hybrid multi-cloud and on-premise infrastructure, alongside distributed systems. Experienced in low-level Linux debugging and building custom internal developer platforms (IDP) using Go and Python. Linux enthusiast and advocate for Immutable Infrastructure (NixOS) and Reproducible Builds, with a strong commitment to open-source contributions.

EXPERIENCE

DevSecOps Engineer

Aug 2025 - Present

PT. Verihubs Inteligencia Nusantara - Jakarta, Indonesia

Managing hybrid multi-cloud and on-premise infrastructure, focusing on robust DevSecOps solutions and platform reliability.

- Orchestrated hybrid Kubernetes clusters across Tencent Cloud, AWS, GCP, and on-premise environments.
- Engineered an automated P0 incident alerting pipeline using Gatus, Incident.io, and Macrodroid.
- Executed production root cause analysis (RCA) utilizing advanced Linux systems analysis, including syscall tracing and kernel auditing.
- Developed custom CLI tooling in Go and Python for infrastructure automation.
- Conducted cluster capacity planning and production load testing for high-throughput AI services using k6.
- Hardened cluster security via network policies, container scanning, and least-privilege IAM roles.
- Managed Wibu CodeMeter infrastructure to enforce cryptographic licensing, DRM, and intellectual property protection for proprietary AI models.

Back-End Engineer Intern

Feb 2025 - Aug 2025

PT. Verihubs Inteligencia Nusantara - Jakarta, Indonesia

Developed high-performance Go services and laid the groundwork for automated MLOps pipelines.

- Architected foundational MLOps pipelines for automated AI model training and deployment.
- Developed high-concurrency RESTful Go APIs for internal multi-face recognition auto-tagging systems.
- Optimized SQL schemas and queries for large-scale biometric data processing.
- Containerized legacy applications, bridging application code and infrastructure deployment.

Back-End Core Team

Oct 2024 - Oct 2025

GDGoC BINUS Bandung - Bandung, Indonesia

Core contributor for community event backend systems.

- Designed backend architectures for event registration systems.
- Mentored junior members on Go best practices and cloud-native concepts.

EDUCATION

Bina Nusantara University

Sep 2022 - Present

Bachelor in Computer Science

Currently in Final Year (Semester 8). Specializing in Systems Engineering and Cloud Architecture. Researching multi-tenant web generator architectures for MSMEs.

SKILLS

- **Programming Languages:** Go, Python, Shell/Bash, Nix, SQL
- **Cloud Platforms:** AWS (EKS, EC2), Google Cloud (GKE), Tencent Cloud (TKE), On-Premise
- **Orchestration & IaC:** Kubernetes, Docker, Terraform, NixOS, Ansible
- **CI/CD & OS:** GitHub Actions, GitOps, Linux, NixOS
- **Observability:** Prometheus, Grafana, Gatus, Incident.io
